TITLE : FILM PASTING DEVICE AND METHOD

ABSTRACT : PROBLEM TO BE SOLVED: To provide a film pasting device and method enduring efficient pasting of a film corresponding to the surface shape of a pasted face of a workpiece with a single worker.

SOLUTION: A roll film pasting machine 1 has a holding roll 11 rotatable around a supporting shaft 11a and an elastically deformable sponge 12 provided on the outer periphery of an inner core member 11b of the holding roll 11. Guide rolls 14, 15 are provided before and behind a lowermost portion of a frame 4 so as to be fitted into a workpiece W1. The roll film pasting machine 1 is guided to the direction of an arrow mark 10, as shown in Fig., in the state of aligning the holding roll 11 in the cross direction of the workpiece W1, whereby a thrust face 12a of the sponge 12 is elastically deformed corresponding to the surface shape of a pasted face S1 to ensure adhesion of a film 3 to the pasted face S1.
